Waterville, Maine

Client name

Waterville Jr High

Delivery Method

Design-Build

Designer

Sheridan Construction

Size

10,000 sf

Waterville Jr. High was in desperate need of additional storage space. Sheridan constructed them a Pre-Engineered metal building by Butler.

This 10,000-square-foot structure will aid the Waterville Jr. High with the storage of busses, and other important resources.

Sheridan acted as the Design-Builder for this project. Additionally, Sheridan self-performed the steel erection and siding for this project.

Building on our promise.
