

**Sheridan
Construction**

University of New England

Harold Alfond Forum

Project Location

University of New England

Delivery Method

Subcontractor

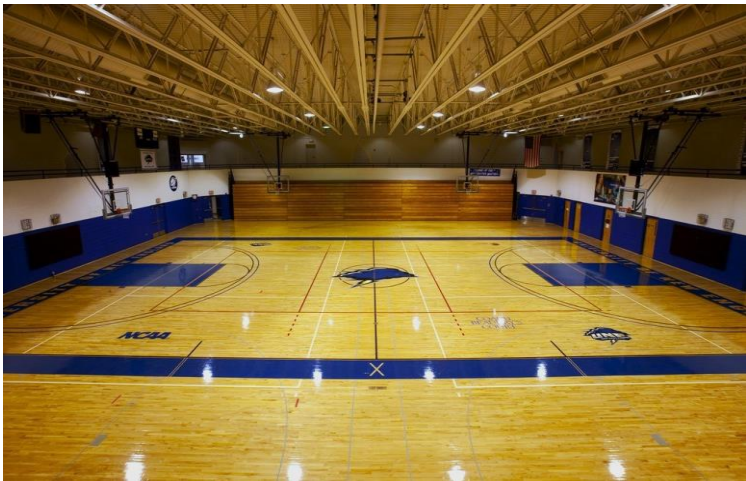

Designer

Sasaki Associates

Project Size

106,500 sf

Sheridan Construction was selected as a subcontractor to furnish and erect the new 106,500 square foot Harold Alfond Forum in Biddeford, Maine.

This project is complete and is being utilized by the University of New England. Their new athletic complex features a 900-seat ice arena, and a 1,200-seat basketball court.

The initial concept of this new complex used a conventional steel design. However, Sheridan's and Butler Manufacturing's™ design teams were able to save the University time, and cost, by proposing a custom-engineered structural system, and Butler's CMR-24 roof and architectural wall panels.

Building on our promise.
