

Butler Brothers

Warehouse Addition

Project Location

Lewiston, Maine

Delivery Method

Design-Build

Designer

Designer - Sheridan Construction
Civil Design - Sitalines PA

Project Size

61,000 sf

Butler Brothers partnered with Sheridan Construction and Sitalines on two projects to design and build a new 61,000 square foot warehouse facility.

Butler Brothers' new building features new and improved warehouse space, in addition to a new showroom and expanded office space.

Additionally, new loading docks were added to better facilitate the transit of their products.

Sheridan Construction self-performed the steel erection of the new Butler metal building, which features a double sloped MR-24 roof system. Sitalines PA was responsible for the civil design.
