

**Sheridan
Construction**

Enercon Technologies

Manufacturing Addition

Client Name

Gray, Maine

Delivery Method

Design-Build

Designer

Grant-Hays / Sheridan Construction

Size

73,000 sf

In 1997, Sheridan was fortunate to work with Enercon Technologies to bring Gray, Maine a world-class manufacturing location. This project featured a production area on the ground floor, resource library, conferencerooms, and executive offices.

In 2016 Enercon Technologies invited Sheridan back to build a major expansion to their facility. These 73,000 square feet of manufacturing and warehouse facility is connected to the current building through a sky bridge. Due to very sensitive vibration tolerances, a special composite slab design was used on the second level for floor mounted high precision, manufacturing equipment.

Building on our promise.
