Construction**

O'Connor Chevrolet

Chevrolet, Buick, & GMC Auto Park

Project Location

Augusta, Maine

Delivery Method

Design-Build

Designer

Sheridan Construction

Project Size

15,028 sf

Designed and Built by Sheridan Construction, a new state-of-the-art building for O'Connor Chevy.

This building includes a geothermal climate control system. 18 holes were dug 360 feet below the dealership, with the purpose of consolidating heat from ground water to heat the building or redistributes heat into groundwater when cooling. This project also includes additional office space, a new retail showroom, and maintenance facility for both incoming, and outgoing vehicles.

Sheridan worked with a Design-Interface-Documents (DID) provided by Genster to meet the auto manufacturers' stringent design requirements.

Building on our promise.
